

CS2100

AVL trees:
remove

Recap

- HW due tonight
- Next HW: remove in AVL tree
- Midterm 2: in 2 weeks
- HW7 is graded

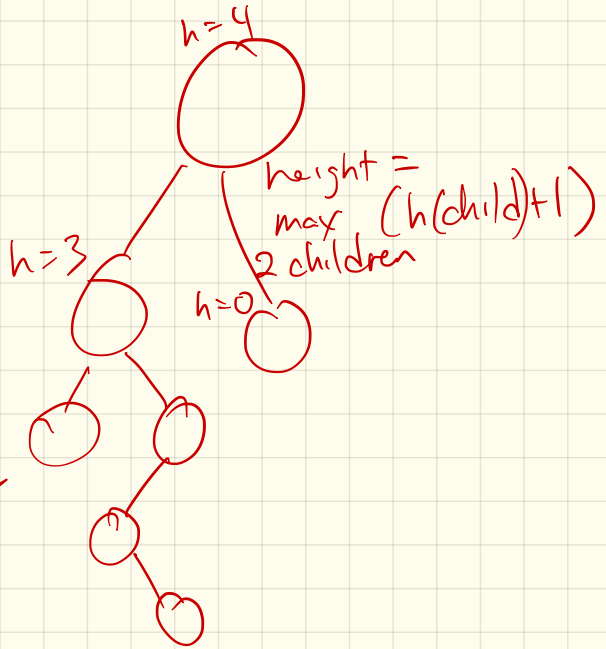

AVL trees :

Height balance property :

For every node x in T ,
the heights of x 's
children differ by
at most 1.

Key property

Note:
NULL has
height -1

Bigger example:

Insert : 1, 2, 3, 4, 5, 6, 7

AVL:

root

NULL

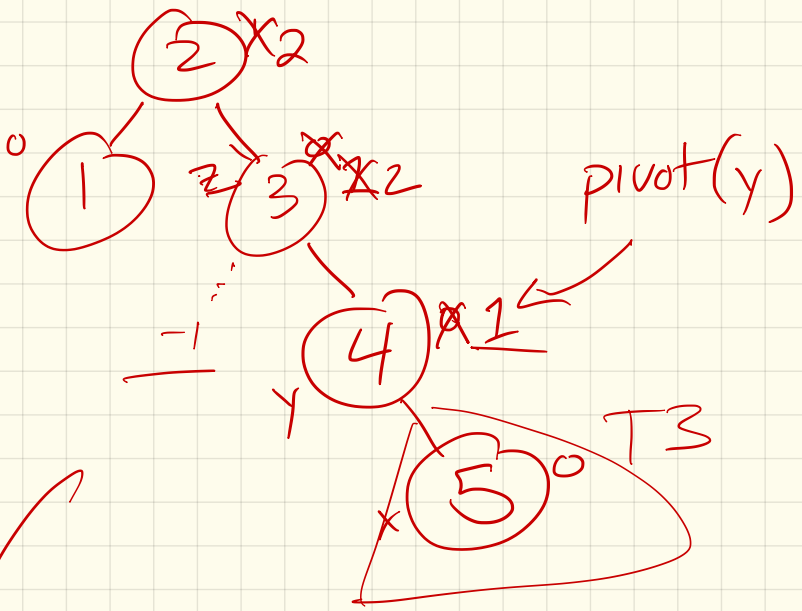

parent
data = 1
left = NULL
right = NULL
aux = 0

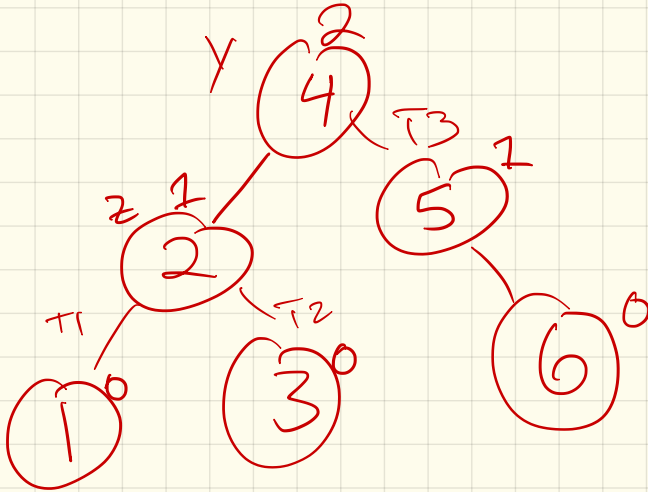

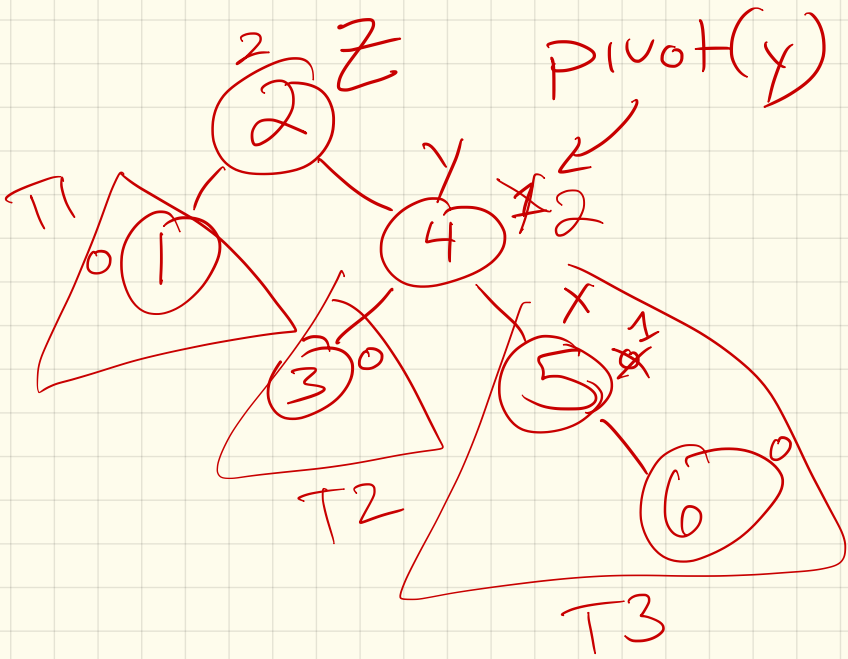

root

pivot (y)

Next things:

- Code!

- in BinaryTree.h

- ~~+~~ in AVLtree.h

- Go over remove

Remove:

- Do binary search tree remove

Then:

Start from deleted node's position

travel up (until root)

reset heights

rebalance if needed

Ex: remove (23)
remove (27)
remove (33)
